Consensus Software Awards

2011 Judges Citation

RiskWare®- Enterprise Risk Intelligence Software

PAN Software Pty. Ltd.

PAN Software accepting the award
from the Hon. Malcolm Turnbull

"In today's volatile market, the Enterprise is required to manage a broad portfolio of risks. They typically threaten the value of the brand, governance and compliance, quality of the environment, the health and well-being of their employees and overall security of the operation. Historically, the enterprise has addressed this broad "risk" spectrum through deployment of a number of 'ad hoc' and disparate solutions.

PAN Software Pty. Ltd. has taken an innovative leap at this problem with the release of their highly successful Enterprise Risk Intelligent software - "RiskWare®".

RiskWare®, leverages a patented (pending) backend engine that not only integrates the various risk verticals but analyses historic data to future proof the business by turning history into strategic management information.

The judging panel was impressed not only by the innovative approach to solving the 'integration' problem, but also by PAN Software's strong business fundamentals combined with a deployment strategy that allows the product to be sold as a standalone platform or via the Cloud. The innovative approach, strong business base and flexible deployment strategy speaks strongly to the longer term potential of the product as a player on the international stage."

The Consensus Awards are judged by a panel of over 27 independent judges based upon the three main criteria of Innovation, Performance and Potential.
